

# **IKS Workshop**

## **Way to electronic Kanban**

### **The "Way to electronic Kanban"**

Sometimes it is difficult for companies to answer the question if a manual Kanban system should be implemented first or if the processes should be supported by a software from the beginning.

Also companies which have a manual Kanban system in place and want to use an electronic Kanban system in the future to optimize their environment have often problems to define the right processes.

The manufactus team has great experience to answer your questions and to define the best e-Kanban processes together with your team and to evaluate your special requirements!

### **The corner stones of the workshops "Way to electronic Kanban" are:**

- ✓ Evaluation of the existing processes
- ✓ Review of your objectives and presentation of new possible e-Kanban processes
- ✓ Review of all additional customer requirements like special processes, Kanban card layouts, interfaces to existing IT systems etc.
- ✓ Definition of the final e-Kanban processes inclusive required scanning-stations, required hardware, required Kanban tools etc.
- ✓ Delivery of a customer specific document including defined e-Kanban processes, required hardware, additional requirements etc.

**The workshop will be the basis for all further discussions and for the definition of the next steps!**

**Please contact us for further questions  
or to define a workshop date!**
