IKS
PDA Module

What is the IKS PDA Module?

The PDA Module is part of the IKS package. The application offers the possibility to get all required Kanban information displayed directly on the screen of a Mobile Terminal (PDA). The PDA Module enables all employees in the area of production and logistics (but also the management) to use a simple and very flexible tool to get all required information and to achieve a very high flexibility.

Benefits

> Displaying of all important Kanban information directly at the shop-floor
> Perfect mobility and flexibility via using Wireless LAN (WLAN) technology
> Scanning of Kanbans and getting of all required information with only one hardware device
> Easy and fast adjustment based on customer requirements

System Requirements

> Mobile Terminal with integrated laser-scanner and Operating System Windows CE 4.2 .Net (or higher)
> Wireless LAN at the production and goods receiving area
> Compact Framework 2.0 (or higher)
> IKS Software, Version 3.5 (or higher)

We recommend to use the IKS PDA package, including approved hardware and pre-installed software application!
